Vishhvaan Gopalakrishnan

vxg135@case.edu | 847·208·9878 | Cleveland, OH

EDUCATION

CLEVELAND CLINIC
CASE WESTERN RESERVE U.
MEDICAL DOCTOR (M.D.)
W/ RESEARCH QUALIFICATIONS
May 2020 | Cleveland, OH

UNIVERSITY OF MICHIGAN AT ANN ARBOR
M.S.E. AND B.S.E. IN BIOMEDICAL ENGINEERING
May 2013 | Ann Arbor, MI
Summa Cum Laude

MEDICAL TRAINING

ROTATIONS
AI: Internal Medicine • Pediatrics
Core: Surgery • Family Medicine • Neurology • OB/GYN • Psychiatry • Emergency Medicine
Electives: Dermatology • Radiology • Palliative Medicine/Hospice • Cardiology Consults • Cardiac Imaging • Infectious Diseases
(AI is Acting Intern meaning full team responsibility)

COMPUTING SKILLS

PROGRAMMING
Over 5000 lines:
Shell • Python • R • MATLAB
HTML • CSS • LaTeX
Familiar: Go • C++
Learning: JavaScript • SQL

APPLICATIONS
Docker/Kubernetes • TensorFlow
KiCAD • Git • PGP • NGINX • Hugo
Vim • VMWare ESXi

RESEARCH

THEORY DIVISION (EVOLUTION AND DRUG RESISTANCE) | POST-DOC
Dec 2018 - Apr 2020 | Cleveland, OH
Worked with **Jacob Scott, M.D.** and led a team to create the EVE, an open source bioreactor that studies evolution of cultured organisms (bacteria and cancer). This tool informs clinical decision making about patient-specific optimal drug therapies.

HEART AND VASCULAR INSTITUTE GENOMICS | RESEARCHER
Jul 2015 – Jul 2017 | Cleveland, OH
Investigated genomic etiologies for the difference between the incidence of atrial fibrillation between men and women with **Mina Chung M.D.**. Project was heavy in statistics (analysis with the R language) and incorporated basic machine learning in Python.

THEREPUTIC ULTRASOUND GROUP | MASTER'S THESIS PROJECT
Jan 2012 – Apr 2013 | Ann Arbor, MI
Designed and prototyped an acoustic coupler for a clinical procedure called histotripsy with my team in the **Xu lab**. We programmed (MATLAB) control of the 3D movement and orientation of the coupler. Work led to designs that were used for patent applications by the lab.

AWARDS

2019	1/15 Nationally	Hematology Opportunities for the Next Generation of Research Scientists (**HONORS**) by The American Society of Hematology
2013	32 Medical Students	Cleveland Clinic Medical School **Full Tuition Scholarship**
2012	University of Michigan	University of Michigan **Honors** College of Engineering **Dean's List**

EXPERIENCE

LIVESCRIBE INC. | RESEARCH AND DEVELOPMENT ENGINEERING INTERN
June 2010 – Sep 2010 | Oakland, CA
- Performed market research and took part in development of cloud-based sync software for the Livescribe smartpen.
- Introduced to database management and learned about server-client relationships.

SIEMENS INC. | RESEARCH AND DEVELOPMENT ENGINEERING INTERN
June 2009 – Sep 2009 | Buffalo Grove, IL
- Took part in the hardware development of a controller for a rainwater catchment device in line with LEED guidelines.
- Gained experience with circuit and printed circuit board (PCB) design as well as bus communication.

ACTIVITIES

- CWRU Free Clinic ..... Business Leader
- Peru Health Outreach Program – CWRU Global Health Program ..... Overall Leader
- Med School Tech Committee ..... Member
- M-HEAL (Eng. Outreach) .... Member
- U. Mich. Engineering Council ..... Leadership
- U. Mich. Math Lab ..... Teacher

TECH IN MEDICINE

Areas I can develop both as a programmer and as a doctor:

- Improving inpatient and surgical workflow/handoff.
- Improving the Electronic Medical Record's (EMR) user interface and helpfulness.
- Designing useful biometric markers for continuous health monitoring and analysis.
- Designing and integrating computer vision into medical imaging and machine learning models into the EMR.

PROJECTS

OPEN SOURCE EVOLUTIONARY BIOREACTOR | Engineering

github.com/vishhvaan/eve-pi

- Defines an open framework for an automated continuous culture system.
- This project incorporates hardware, I^2C-based circuitry, and PCB designs, a Python-based software package, and experimental protocols, and sample experimental data.
- Software is forked and used by researchers at the Children's Hospital of Philadelphia, University of Cape Town, BforCure (a French BioTech company), and others.

IMMEDIATE RECURRENCE OF ATRIAL FIBRILLATION SUSCEPTIBILITY | Machine Learning

github.com/vishhvaan/ml-iraf-analysis

- This project aims to form better predictions about when patients are at risk for recurrence of atrial fibrillation after cardioversion.
- I use a Cleveland Clinic cardioversion database in combination with XGBoost and Deep Learning techniques.
- Models are queried for insights that could shed light on the pathophysiology of recurrence which could be tested in follow-up biological or clinical research.

DIY INTERNET OF THING THERMOSTAT | Engineering

github.com/vishhvaan/thermostat

- Enables users to make use of cheap temperature (and humidity, barometric pressure, and volatile organic compound gas) sensors.
- An application written in Go and executed on the Raspberry Pi processes sensor-generated data.
- Data is read by a Home Assistant instance to automate functions around the user's home.
